SPEAKER
Véronique Benhamou, BSc, DDS, Cert. Perio., FADI, FPFA

Dr. Véronique Benhamou received a B.Sc. and D.D.S. degree from McGill University. She then completed a year-long multidisciplinary residency program at the Montreal Children’s Hospital prior to continuing her postgraduate training at the Goldman School of Graduate Dentistry in Boston. She obtained a specialty certificate in periodontology and implant surgery in 1989. Dr. Benhamou was clinical instructor at Boston University, McGill University and Université de Montréal as well as director of the periodontal residency programs at the Montreal Children’s Hospital, the St Justine Hospital for children and the Montreal General Hospital.

Currently, Dr Benhamou is associate professor and Director of the Division of Periodontics of McGill University dental School. She also maintains a private practice specializing in bone regeneration and aesthetic periodontal surgery. Dr Benhamou is past President of the Quebec Periodontal Association. She is a good standing member for both the Canadian Academy of Periodontology and the American Academy of Periodontology as well as a member of various other dental associations. She has lectured extensively world-wide, published in peer-reviewed journals, is very involved in continuing dental education and was awarded the W.W. Wood Awards for “Excellence in Dental Education” and the AAP award for “Outstanding Teaching and Mentoring in Periodontics”.

FUNDAMENTALS OF PERIODONTAL SURGERY

SYNOPSIS
The concerned general dental practitioner can often be faced with conditions that may require a surgical approach. Examples of such conditions may be: accessing margins of deep caries and fractures, surgical debridement for pocket reduction (to reduce or contour the bone) or for regenerative purposes and soft tissue procedure for augmenting attached gingiva. Understanding appropriate case selection, when to refer, precision clinical techniques and wound healing will improve surgical success. Performing these procedures requires a certain knowledge of basic treatment planning, anatomy and surgical skills.

PROGRAM AT A GLANCE
8:00 am     Breakfast
8:30 am     Treatment options: Non-surgical therapy
9:15 am     Treatment options: Surgical therapy (indications, limitations)
10:15 am    Break
10:30 am    Basic surgical techniques:  
               • Surgical planning  
               • Incisions and flap design  
               • Flap management  
               • Suturing techniques  
               • Post-operative management
12:30 pm    Lunch
1:30 pm     Zooming on Clinical crown lengthening
2:15 pm     Zooming on Management of bone defects
3:15 pm     Break
3:30 pm     Zooming on Muco-gingival procedures
4:30 pm     Discussion

BENEFITS
Upon completion of this course you will:
• Understand the objectives of non-surgical therapy and how this relates to current practice
• Gain an appreciation for the range of periodontal treatment options available and indications for each
• Understand the indications for and limitations of surgical therapy
• Differentiate between different types of healings: repair vs. regeneration
• Know when to refer
